Projects

Course Management System
Developed a program that helps with the management of courses by students in a given University ,using JAVA (CSVfile to save the process)

University Website
Built a website that gives the user the ability to view the university info(faculties, event, campuses, admission)with a sign up page, website was built using HTML, CSS, java script,bootstrap,media query

Medical Center Management System
Designed medical center management software with secure login, user management, and data storage for patient files, appointments, and staff.
Implemented using JavaFX, Java, databases, and CSV files for efficient data handling and preservation

Travel Booking website
Created a responsive city tour guide website with features for managing cities, a feedback form, and cross-device accessibility using HTML, CSS, JavaScript, and Bootstrap

Rent House Web App/Mobile App
Developed a full-stack rental app with Spring Boot (REST APIs, OTP email, Google/GitHub sign-up, Stripe payments, chatbot, admin-only CRUD via middleware), a React.js responsive frontend (search, view, rent, inquire visits, favorites, authentication), and a React Native mobile app for accessibility.

Teacher management in the university

The project manages university teachers and schedules using OOP, pointers, and linked lists in C++. It includes feedback, teacher ranking, and data storage on a hard disk with a visual interface.

Delivery App

Built full-stack delivery platform with PHP Laravel, HTML/CSS, and JavaScript, integrating payment systems (Stripe) and Firebase for notifications. The platform includes secure multi-role access, email verification, real-time GPS tracking, live chat, dynamic pricing, push notifications, multi-currency support, and admin features for driver approvals, payment management, reports, and loyalty programs.

Skills
